DEKA-ColorLack

High gloss waterbased enamel

Universal high gloss enamel for hobbies using wood • paper • cardboard • styrofoam • leather • ceramic • stone • plaster • metal • foils • glass • metal foils • models and much more. Can also be used with an airbrush.

Features:

Ultra opaque long-lasting enamel gloss • easy-to-use • lightfast • water resistant • bright shades • durable gloss • elastic • can be thinned with water • can be heat hardened . . . and waterbased, of course!

Directions:

Stir DEKA-ColorLack before using. The object to be painted must be completely dry and free of dust and grease (fingerprints!). Detergents are not suitable for cleaning, we recommend using a solvent such as spirit. A soft hairbrush should be used with DEKA-ColorLack. A thick application of paint will provide an even coat. When multiple coat applications are to be used, each coat must be heat hardened after a drying time of 48 hours, before the next coat can be applied. Allow freshly painted objects to dry thoroughly in a dust-free area at room temperature. Depending on the thickness of the coat, the paint will be dry to the touch in 1 hour and fully dry after 3 days. Heat hardening increases adherence and scratch resistance.

All shades can be blended with each other and may be thinned with water (max. 5 %) if necessary. Lighter shades can be achieved by mixing with Glossy Clear Varnish No. 10-00. Clean up brushes and other utensils immediately after use with cold water. Spots with DEKA-ColorLack cannot be removed.

For all smooth, non-absorbent surfaces like metal and plastic, a basecoat with DEKA-ColorPrimer No. 14-00 for better adhesion is recommended.

The designs of the DEKA-Patterns can easily be transferred with DEKA-tracing paper.

Heat hardening:

Allow the painted object to dry at least 2 days. Place it in an unheated oven, then turn on the oven up to 120 –150°C, max. 170°C. After 50 minutes turn off the oven and leave the object there to cool. In ovens without automatic temperature control, use an oven thermometer to regulate the temperature.

Attention: Only non-heat sensitive objects (like stone, ceramic, glass etc.) can be heat hardened. Heat sensitive objects, such as acrylic glass, plastics and leather, cannot be heat hardened.

Painting on china:

DEKA-ColorLack is not permanent against acids and mechanical strain, even if it has been heat hardened. Drinking cups should only be painted on the outside and plates only on the outer rim. Because of the mechanical strain, everyday china should not be painted with DEKA-ColorLack. China that is rarely used, can be painted with DEKA-ColorLack, as long as it is heat hardened, washed in cold water without detergent and not left soaking in water.

DEKA-ColorLack can be used for many creative projects. Whenever there is something to be decorated, to be protected or to be coloured, wherever an extra touch of colour is needed, DEKA-ColorLack is indispensable! Glossy Clear Varnish No. 10-00 as well as Matte Clear Varnish No. 10-01 are suited as protective and topcoating enamel for many purposes.

DEKA paints and dyes have represented excellent quality in the hobby and craft field for more than 90 years. The reason this level has been maintained for so long can be attributed directly to intensive laboratory research. Thanks to our international experience and expertise, DEKA paints are always produced utilizing the newest standards in chemical technology. The careful choice of raw materials has allowed us to combine top quality with progressive environmental consciousness. More than 60 years ago, DEKA was considered a forerunner by creating waterbased paints for textiles.

DEKA - The specialist in hobby paints!

Packaging: 25 ml, 50 ml, 250 ml

10-04 Lemon	10-30 Cyclame	10-66 Fir Green
