## DEKA-ColorMatt

Waterbased Matte Hobby Paint

Versatile hobby paint for wood • glass • ceramic • clay • stone • plaster • metal • foils • styrofoam • many wax and plastic surfaces • screens • paper • cardboard and lots more. Ideal paint for tole style and reverse glass painting as well as modeling!

### Features:

Matte satin finish - ultra opaque - quick drying - easy to use - may be thinned with water - lightfast - weather resistant ... and waterbased, of course!

### Directions:

Stir DEKA-ColorMatt well before using. The object to be painted must be completely dry and free of dust and grease (fingerprints!). Detergents are not suitable for cleaning, we recommend using a solvent such as spirit. Allow freshly painted surfaces to dry thoroughly in a dust-free area at room temperature. Depending on the thickness of the coat, the paint will be dry to the touch in a short period of time.

All shades can be blended with each other and may be thinned with water (max. 5%) if necessary. Pastel shades can be achieved by mixing with DEKA-ColorMatt White No. 12-92. Clean up brushes and other utensils immediately after use with cold water. Spots with DEKA-ColorMatt cannot be removed.

DEKA-ColorMatt is especially suited for many creative projects and for colourful decorating. To give DEKA-ColorMatt a glossy surface, it is possible to topcoat it after drying with DEKA-ColorLack Glossy Clear Varnish No. 10-00.

Before painting on uncoated wood, sand it first with fine sandpaper and clean off all dust. For all smooth, non-absorbent surfaces like metal and plastic, a basecoat with DEKA-ColorPrimer No. 14-00 for better adhesion is recommended.

The designs of the DEKA-patterns can easily be transferred with DEKA-tracing paper. The DEKA-outline pen is ideal for the reverse glass painting technique with DEKA-ColorMatt.

With DEKA-Patina No. 13-00 you can give painted objects an antique aged effect. This technique is often used in tole style painting.

### Painting on china:

DEKA-ColorMatt is not permanent against acids and mechanical strain. Drinking cups should only be painted on the outside and plates only on the outer rim. Because of the mechanical strain, everyday china should not be painted with DEKA-ColorMatt. China that is rarely used, can be painted with DEKA-ColorMatt, as long as it is washed in cold water without detergent and not leftsoaking in water.

DEKA paints and dyes have represented excellent quality in the hobby and craft field for more than 90 years. The reason this level has been maintained for so long can be attributed directly to intensive laboratory research. Thanks to our international experience and expertise, DEKA paints are always produced utilizing the newest standards in chemical technology. The careful choice of raw materials has allowed us to combine top quality with progressive environmental consciousness. More than 60 years ago, DEKA was considered a forerunner by creating waterbased paints for textiles.

DEKA - the specialist in hobby paints!
