### **Your surface material**

As surface material you can choose wood, plastics, glass, metal, stone, terra-cotta, styrofoam or others.

### **Step 1 - Priming**

For priming the surface you can choose from the **DEKA-Color** assortment. You will obtain fascinating effects with **DEKA-ColorMetallic** as a primer.

### **Step 2 - Determining of the craquelure result**

Depending on the technique of application you will obtain different crackle shapes on different surfaces. The crackle forming is influenced by many factors, such as the kind of surface material, the temperature of the environment, the priming colour, the drying time of the priming and so forth.

If you desire certain results we recommend testing.

### **Step 3 - Application of DEKA-Color Crack Enamel**

Apply generously on the dried primed surface and let dry. **DEKA-Color Crack Enamel** can also be applied directly onto the surface material.

### **Step 4 - Application of the contrast colour**

As a contrasting colour you can choose **DEKA-ColorLack \***, **DEKA-ColorMatt \*** or **DEKA-ColorCristal** After a short time the first cracks will be visible.

Clean brushes and working tools with water.

As topcoating and protective enamel we recommend:

**DEKA-ColorCristal** - colourless

**DEKA-ColorLack** - glossy clear varnish or matte clear varnish

**DEKA-Color Special** varnish - fully matte or high gloss

### **article-numbers: DEKA-Color Crack Enamel**

<b>Colour</b>	<b>50 ml</b>	<b>125 ml</b>
colourless	51400	51500

\* except shade numbers – 94 gold and - 96 silver.
