

For creative work on glass, metal, ceramic, plastic, plaster, stone, foil, modeling and lots more

Features:

Transparent - high gloss - brilliant shades - good fade resistance - concentrated colour - crystal clear - water resistant - gloss retentive - flexible - can be heat hardened

Directions:

Stir DEKA-Transparent well before using. Before beginning any glass painting project, clean the surface to be painted thoroughly, and keep it free of dust, grease and fingerprints throughout the process. Detergents are not suitable for cleaning; we recommend a solvent such as mineral spirits. Use a soft dry bristle brush with DEKA-Transparent. If a generous amount of paint is applied, an even coat and good lightfastness will be achieved. If applied sparingly or if paint has been thinned down, the lightfastness will diminish drastically. If different colours get painted on top of each other, the first coat has to be heat hardened first before the next colour can be applied.

Allow freshly painted surfaces to dry thoroughly in a dustfree area at room temperature. The paint will be dry to the touch in approx. 2 hours (depending on the thickness of the coat) and will be fully dry in 3 days. Heat hardening will further improve its adhesive strength and scratch resistance.

All shades can be blended with each other. Lighter shades can be achieved by mixing with Extender No. 02-00. Clean up brushes and other utensils immediately after use with DEKA-Transparent Thinner No. 02-98. If necessary, shades can be thinned down (up to max. 5%) with DEKA-Transparent Thinner No. 02-98. Spots with DEKA-Transparent cannot be removed. DEKA-Transparent is a decorative paint and therefore not weatherproof.

Heat Hardening:

To heat harden, wait at least 3 days after painting, then place painted items in a cold oven, turn oven on to 100-120 °C. After 30 minutes turn oven off and leave object in oven to cool. If oven has no temperature indicator, use a thermometer that measures up to 200 °C. Check temperature from time to time and regulate heat accordingly. Be careful only to heat harden materials that are not sensitive to heat (glass, stone, ceramics etc.). For example acrylic glass and plastic cannot be heat hardened.

Painting on China:

Even if heat hardened DEKA-Transparent is not permanent against acids and mechanical strain. Drinking cups should only be painted on the outside, and plates only on the outer rim. DEKA-Transparent is not recommended for china in everyday use. Decorative china, if used infrequently, can be painted with DEKA-Transparent. Heat harden these pieces, and wash them in cold water without detergent. Do not leave them soaking in water or put in the dishwasher.

DEKA-Transparent is the ideal paint for glass pictures, coat of arms painting, metal foil painting and much more. For relief - like outlines we recommend our DEKA-Outline Paste. DEKA-Transparent Contour Paint No. 02-97 can also be used just like DEKA-Outline Paste for a stained glass effect. DEKA-Contour Paint and DEKA-Outline Paste are applied and heat hardened first. Then the colours are filled in. Afterwards, if you polish DEKA-Contour Paint by using a rag a metallic effect can be achieved.

DEKA-Transparent can be used for a lot of creative projects. Wherever there is something to be embellished, to be protected, or something colourful to be created, DEKA-Transparent is indispensable! DEKA-Transparent is especially suited as a glaze for all types of wood, as the natural grain of the wood remains visible. DEKA-Transparent Extender No. 02-00 can also be used as a protective shield or top coat for all types of applications.

DEKA paints have represented excellent quality in the hobby and craft field for more than 90 years. The reason this level has been maintained for so long can be attributed directly to intensive laboratory research. Thanks to our international experience and expertise, DEKA paints are always produced utilizing the newest standards in chemical technology. The careful choice of raw materials has allowed us to combine top quality with progressive environmental consciousness. More than 60 years ago, DEKA was considered a forerunner by creating waterbased paints for textiles.

DEKA - the specialist in hobby paints!

Packaging: 25 ml, 125 ml

Shades of DEKA-Transparent:

02-91 White	02-53 Dark Blue	02-97 Contour Paint
02-04 Lemon	02-39 Violet	02-98 Thinner
02-10 Orange	02-62 Light Green	05-88 Outline Paste Grey
02-15 Red	02-64 Green	05-90 Outline Paste Black
02-17 Carmine	02-84 Brown	05-94 Outline Paste Gold
02-49 Blue	02-90 Black	05-96 Outline Paste Silver

We guarantee the consistent top quality of our paints. However, we cannot guarantee the results obtained by their use, due to differences in individual application and workmanship.

Please note: Flammable. Do not inhale paint vapor, provide adequate ventilation, avoid eye and skin contact. Keep out of reach of children. Not a toy.
