

DEKA Transparent

**The professional
glass and decorative paint**

DEKA-Transparent

for hobby and creative work on glass, wood, metal, ceramic, acrylic glass, plaster, metal foils, stone, modeling and lots more

It's clear • **DEKA-Transparent**

FEATURES:

fully transparent – high gloss – bright, intense shades – good lightfastness
– brilliant – water resistant – gloss retentive – easy-to-use – can be heat hardened

PLEASE NOTE:

Do not inhale paint vapor. Provide adequate ventilation. Keep out of reach of children. Flammable.

DIRECTIONS:

Stir **DEKA-Transparent** before use. Before beginning any glass painting project, thoroughly clean the surface to be painted, and keep it free of dust, fingerprints and grease throughout the process. Detergents are not suitable for cleaning; we recommend a solvent such as mineral spirits. Use a soft dry bristle brush with **DEKA-Transparent**. If a generous amount of paint is applied, an even coat and good lightfastness will be achieved. If applied sparingly or if paint has been thinned down, the lightfastness will diminish drastically. If different colours are to be painted on top of each other, the first coat has to be heat hardened before the next colour can be applied.

Allow freshly painted surfaces to dry thoroughly in a dustfree area at room temperature. The paint will be dry to the touch in appr. 2 hours (depending on the thickness of the coat) and will be fully dry in 3 days. Heat hardening will further improve its adhesive strength and scratch resistance.

All shades can be blended with each other. Lighter shades can be achieved by mixing with Extender # 02-00. Clean up brushes and other utensils immediately after use with **DEKA-Transparent Thinner # 02-98**. If necessary, shades can be diluted (up to max. 5%) with **DEKA-Transparent Thinner # 02-98**.

Accidental spots with **DEKA-Transparent** cannot be removed.

DEKA-Transparent is a decorative paint and therefore is not weatherproof.

HEAT HARDENING: To heat harden, wait at least 3 days after painting, then place painted items in a cold oven. Turn oven on to 100 - 120°C. After 30 minutes, turn oven off and leave object in oven to cool. If oven has no temperature indicator, use a thermometer that measures up to 200°C. Check temperature from time to time and regulate heat accordingly.

PLEASE NOTE: Heat harden only materials that are not sensitive to heat (glass, stone, ceramics, etc.). For example, acrylic glass and plastic cannot be heat hardened.

PAINTING ON CHINA: Even if heat hardened, **DEKA-Transparent** is not permanent against acids and mechanical stress. Drinking cups should only be painted on the outside, and plates only on the outer rim. **DEKA-Transparent** is not recommended for china in everyday use. Decorative china, if used infrequently, can be painted with **DEKA-Transparent**. Heat harden these pieces, and wash them in cold water without detergent. Do not leave them soaking in water or put them in the dishwasher.

DEKA-Transparent is the ideal paint for glass pictures, coat of arms painting, metal foil painting and much more. For relief-like outlines, we recommend our **DEKA-Outline Paste** which comes in 4 shades. **DEKA-Transparent Contour Paint # 02-97** can also be used just like **DEKA-Outline Paste** for a stained glass effect.

DEKA-Contour Paint and **DEKA-Outline Paste** should be applied and heat hardened before the colours are filled in. Afterwards, if you polish **DEKA-Contour Paint** by using a rough cloth, a metallic effect can be achieved.

DEKA-Transparent can be used for many creative projects. Whenever there is something to be decorated or to be coloured, wherever an extra touch of colour is needed, **DEKA-Transparent** is indispensable! **DEKA-Transparent** is especially suited as a glaze for all types of wood, as the natural grain of the wood remains visible.

DEKA-Transparent Extender # 02-00 can also be used as a protective shield or top coat for all types of applications.

**DEKA paints...for 75 years a
hallmark of excellent quality
in the arts and crafts field.**

Crystal clear with **DEKA-Transparent**

The reason this level of excellence has been maintained for so long can be attributed directly to intensive laboratory research. Thanks to our international experience and expertise, **DEKA** paints are always produced utilizing the newest standards in chemical technology. The careful choice of raw material has allowed us to combine top quality with progressive environmental consciousness. As long as 45 years ago, **DEKA** was considered a worldwide forerunner by creating waterbased paints for textiles.

**DEKA -
the specialist
for hobby and
textile paints!**

DEKA-Transparent is available in 20 ml and 125 ml glass bottles, the **DEKA-Outline Paste** for glass painting in 25 g tubes.

We guarantee the consistent top quality of our paints. However, we cannot guarantee the results obtained by their use, due to differences in individual application and workmanship.
